Date: March 25th, 2025

I hope this message finds you well.

As part of our CIS 370 project at Buffalo State University, our team is developing an Appointment Scheduling System designed specifically for HealthyLife Clinic. To ensure the system we design meets the actual needs of your clinic, we would like to conduct a short interview with you regarding your current scheduling process and pain points.

Since we understand your time is valuable, we would like to interview via email for your convenience. If you're okay with that, we'll follow up with a few focused questions that should take no more than 5-10 minutes to answer.

We appreciate your support and collaboration.

Warm regards,

Yash Patel

Project Manager - Team 2B

Dear Yash (Project Manager)

Thank you for reaching out to me. I would be happy to assist with the interview. Please send the questions at your convenience, and I will respond as soon as possible.

Best regards,
Dr. Maria Garrity
Clinic Manager – HealthyLife Clinic

Dear Dr.Garrity,

Once again, we appreciate your willingness to help our initiative and your confirmation of your availability. I would like to sincerely thank you for your time and cooperation on behalf of Team 2 B.

As the HealthyLife Clinic's clinic manager, I greatly value your insights. We must obtain a thorough grasp of your clinic's present appointment scheduling procedures, major operational issues, and particular requirements that the suggested solution should meet to proceed successfully with the Analysis Phase of our system development.

To that end, our team has carefully crafted a set of focused and relevant questions. Your responses will play a crucial role in shaping our system's functional design, user interface structure, and overall project strategy. Our goal is to ensure that the final product is both technically sound and tailored to improve efficiency and patient satisfaction at HealthyLife Clinic.

to me, Lucky, Dougl... ▾

Here are the Interview Questions:

- 1. What are the main challenges you currently face with your manual scheduling system?**
- 2. How do staff currently handle cancellations, no-shows, and rescheduling?**
- 3. Would automated reminders (SMS/email) help reduce patient no-shows?**
- 4. What patient information is typically collected during appointment booking?**
- 5. How important is it to have role-based login (patients, doctors, admin)?**
- 6. What devices do staff and patients mostly use — desktops, tablets, or mobile phones?**
- 7. What features would make the appointment process easier for your team and patients?**
- 8. Are there any additional functions or "wish-list" features you've thought about implementing?**

Your insights will directly shape our functional design, mockups, and final system proposal. We appreciate your help!

Sincerely,

Dear Yash,

Thank you for preparing such a well-organized and thoughtful set of questions. I appreciate your team's dedication to understanding our operational workflow at HealthyLife Clinic. Please find my detailed responses below:

1. Key Challenges:

One of our primary challenges involves the high occurrence of double bookings and manual scheduling errors. Since our clinic currently operates using a paper-based system, it becomes difficult to monitor real-time doctor availability, track changes, or confirm whether patients have canceled or simply failed to attend. These issues impact overall efficiency and patient satisfaction.

2. Cancellations and Rescheduling:

Cancellations and rescheduling are typically handled via phone calls or in-person requests at the front desk. Unfortunately, we lack a structured method for logging and updating these changes. In some cases, cancellation messages are misplaced or not recorded at all, resulting in confusion

2. Cancellations and Rescheduling:
Cancellations and rescheduling are typically handled via phone calls or in-person requests at the front desk. Unfortunately, we lack a structured method for logging and updating these changes. In some cases, cancellation messages are misplaced or not recorded at all, resulting in confusion and scheduling conflicts.

3. Automated Reminders:
Yes, we believe that automated SMS and email reminders would be extremely beneficial. Many patients forget about appointments that were scheduled weeks in advance. Sending timely reminders could help reduce no-show rates, ensure better time utilization for our staff and physicians, and improve patient communication overall.

4. Information Collected During Booking:

When a patient requests an appointment, we generally collect the following details:

Full Name

Contact Number (and Email, if available)

4. Information Collected During Booking:

When a patient requests an appointment, we generally collect the following details:

Full Name

Contact Number (and Email, if available)

Preferred Doctor (if any)

Requested Date and Time

Reason for Visit

Occasionally, we also document insurance information or special requests, such as a preference for a male or female provider.

5. Role-Based Access:

We would strongly benefit from a role-based login structure. Doctors should have the ability to update their availability and view their daily schedule. Administrative staff need broader access to oversee all patient bookings and clinic schedules. Patients should be able to log in to request,

5. Role-Based Access:

We would strongly benefit from a role-based login structure. Doctors should have the ability to update their availability and view their daily schedule. Administrative staff need broader access to oversee all patient bookings and clinic schedules. Patients should be able to log in to request, modify, or cancel appointments with limited access to their own records only. This structure will improve both security and workflow efficiency.

6. Device Usage:

Our front desk and administrative staff primarily use desktop computers. However, we are aware that a growing number of our patients would prefer accessing appointment features via mobile devices. It's important that the system you develop be fully responsive and user-friendly across all platforms — desktops, tablets, and smartphones.

7. High-Priority Features Requested:

The features that would have the most immediate impact on our workflow and patient experience include:

An interactive calendar view showing

7. High-Priority Features Requested:

The features that would have the most immediate impact on our workflow and patient experience include:

An interactive calendar view showing doctor availability and current bookings

The ability to automatically send reminders and confirmations

Real-time availability tracking for each provider

A digital interface that allows patients and staff to cancel or confirm appointments with ease

8. Additional Wish-List Features:

If possible, we would also like to see the following advanced features included in the system, either in this phase or in future updates:

Printable daily schedules for doctors and staff

A patient appointment history log accessible to both doctors and patients

Waitlist functionality where patients

8. Additional Wish-List Features:

If possible, we would also like to see the following advanced features included in the system, either in this phase or in future updates:

Printable daily schedules for doctors and staff

A patient appointment history log accessible to both doctors and patients

Waitlist functionality, where patients can receive notifications if a slot becomes available

A multilingual interface to accommodate patients whose primary language is not English

Please let me know if you require any additional clarification on the points above. I look forward to seeing how your team incorporates these requirements into the system design and appreciate your efforts toward building a solution that aligns with our clinic's operational goals.

Best regards, _____

Dear Yash, Thank you for prepari...

Patel, Ya... 2:55 PM

to me, Lucky, Dougl... ▾

Dear Dr. Garrity,

Thank you for the thorough and thoughtful responses. Based on your insights, we've identified the following key requirements:

- Online booking and cancellation
- Role-based login (Admin, Doctor, Patient)
- Doctor-side availability management
- Mobile-friendly responsive UI
- SMS/email reminders
- Cancellations and reschedule tracking
- Waitlist, multilingual support, and printable doctor schedules

We'll be implementing these features in our system design and will share our UI mockups shortly.

Best Regards,

Thank you for the detailed summary. I appreciate how clearly you've outlined the key requirements and aligned them with our clinic's current needs and long-term goals.

All the listed features — especially online booking, role-based access, mobile compatibility, and automated reminders — will bring significant improvements to our current workflow. I'm also pleased to see that you've included advanced features such as waitlist support and printable schedules, which are often overlooked but very valuable to our operations.

I look forward to reviewing your UI mockups and continuing to provide input as your design progresses. Please don't hesitate to reach out if you need further clarification or if additional feedback is required.

Best regards,
Dr. Maria Garrity

Dear Dr., Garrity,

Thank you again for your collaboration so far. Based on your feedback and the requirements gathered during the interview phase, we have completed initial user interface mockups for the new Appointment Scheduling System.

Attached are early HTML-based prototypes for the following interfaces:

- Patient Booking Page – Allows patients to schedule, cancel, or reschedule appointments
- Doctor Availability Page – Enables doctors to update their availability
- Admin Dashboard – View and manage all appointments, confirmations, and cancellations

Each page is designed to be fully mobile-responsive, user-friendly, and tailored to the needs you identified. We've also included fields such as the "Reason for Visit", with visibility limited to appropriate roles (doctor/admin).

We would greatly appreciate your review and any suggestions you may have for improvement before we move into backend integration and functionality.

Please let us know a convenient time next week if you'd ~~prefer a quick~~ walkthrough as

Each page is designed to be fully mobile-responsive, user-friendly, and tailored to the needs you identified. We've also included fields such as the "Reason for Visit", with visibility limited to appropriate roles (doctor/admin).

We would greatly appreciate your review and any suggestions you may have for improvement before we move into backend integration and functionality.

Please let us know a convenient time next week if you'd prefer a quick walkthrough as well.

I am attaching a Zip file of the webpage so you can unzip it and you can see it.

Best regards,

Yash Patel

Thank you for sharing the mockups. I've reviewed all three interfaces, and I'm impressed with the clean design and clarity of layout. Everything looks intuitive and easy to navigate. I especially appreciate the inclusion of the "Reason for Visit" field and the thoughtful role-based design.

A few small suggestions for enhancement:

On the Doctor Availability page, it may help to allow input for "available location" if the clinic expands.

For the Admin Dashboard, a simple status filter (e.g., Confirmed, Canceled, Pending) could be useful.

Other than that, the layout and usability look excellent. I'm looking forward to seeing the backend functionality and demo.

Best regards,
Dr. Maria Garrity

On behalf of Team 2B, I am pleased to submit the final deliverables for our CIS 370 project titled:

"Appointment Scheduling System for HealthyLife Clinic."

This project was developed based on the case study you provided and was guided by your valuable feedback throughout the semester.

Below is a list of the documents and files included in our final submission:

 **BUSINESS PROPOSAL YASH**
Contains full SDLC documentation, functional requirements, planning, feasibility study, interview responses, and design decisions.

 **Project_Estimate_Template_CIS370**
Breakdown of project phases, cost estimations, labor/material allocation, and contingency totals.

 **healthylife-clinic-project.zip**

healthylife-clinic-project.zip

Includes HTML prototypes (patient.html, doctor.html, admin.html), CSS styling, and JS form behavior.

DATA FLOW DIAGRAMS YASH

Process models showing system data flow between patients, doctors, admin, and the backend.

CRITICAL PATH 1.jpg and CRITICAL PATH DIAGRAM

Visual diagrams of project milestones and dependencies across 12 weeks.

HOURS WE MET AND WORKED

Team work log with contribution hours and breakdown by date and task.

Case Study HealthClinic.docx

The original project scenario with assignment requirements was used to guide the structure and deliverables.

Healthy_Project_Email_Thread

Full professional email thread documenting our client interview, progress updates, feedback, and final confirmation.

We are truly grateful for your participation

feedback, and final confirmation.

We are truly grateful for your participation as our client and for the ongoing support throughout the project lifecycle. Your input helped us shape a functional and meaningful system aligned with real clinic operations.

Please feel free to reach out if you'd like the files packaged differently or require any further clarification.

Warm regards,
Yash Patel
